Problem Statements : **Limited Accessibility**: A significant problem faced by bookstores is limited accessibility, which can be due to various reasons such as physical location, operating hours, or lack of an online presence. This can limit their customer base and revenue potential. **Difficulty in Identifying Customer Needs**: Bookstores may struggle to identify the changing needs and preferences of their customers, which can result in lost sales opportunities and decreased customer satisfaction. **Environmental Concerns**: With the growing concern for environmental sustainability, bookstores may struggle to maintain their business model.

Objectives:To create an online bookshop management system that allows users to browse, search, and order books online.To provide a platform for book sellers to showcase and sell their books online.To provide a secure payment system that ensures the safety of user's personal and financial information.To provide a user-friendly interface that allows users to easily navigate the system and find the books they are looking for.To provide a system that can generate reports and provide analytics to help book sellers make informed decisions about their inventory.

Deliverables: A fully functional online bookshop management system that allows users to browse, search, and order books online. A secure payment system that ensures the safety of user's personal and financial information. A user-friendly interface that allows users to easily navigate the system and find the books they are looking for. A system that can generate reports and provide analytics to help book sellers make informed decisions about their inventory. Technical documentation and user manuals.

Database	MYSQL

Methodologies : Waterfall: This is a traditional methodology that follows a linear approach, where each phase of the project is completed before moving on to the next phase. This methodology is suitable for projects with well-defined requirements, a stable team, and a fixed budget.**Agile:** Agile methodology emphasizes collaboration, flexibility, and iterative development. This methodology is suitable for projects with evolving requirements, a dynamic team, and a focus on delivering a working product quickly.

Project Overview : **Users' view:** Users have to create their profile by signing into Book Shop. For logging into the shop you have to provide your email and password. Then they can search for various books . Also, they can use the responsive search bar provided in the shop for finding available books. After that user can pay for the desired book using online transaction method. Users can also give book ratings and feedback. Books will deliver to their address.

Admin's view: Register/Login , Maintaining Orders , Payment , Add new book , Update book details , Delete books ,Maintaining users and book delivery Check Message .

Scope: The scope of the proposed project includes the development of an online bookshop management system that allows users to browse, search, and order books online. The system will also allow book sellers to showcase and sell their books online. The system will include a secure payment system, a user-friendly interface, and the ability to generate reports and provide analytics to help book sellers make decisions about their inventory.

Risk ; The project may face technical risks ,budget Risks budget ,Schedule risks

Dependencies : Data Sources ,Third-party ,User Feedback , Technical Dependencies , Team Dependencies
